

World and Greek population Situations, trends, suggestions

*NICHOLAOS D. LOIZOS **

Summary

The characteristics of the world population are its constantly increasing trend (recorded population of over 7 billion people), its unequal distribution, the infertility and hyper fertility depending on regions of the world and the intense and diverse migration.

Regarding the Greek population, we can observe a strong unequal distribution respectively, mainly after the 60s, a growing demographic aging of the population since the 70s, infertility since the 80s and migration movements since the 90s.

Key words: World-Greek population, globalization, demography, subfertility, migration
